

# Travel Guidance for Vaccinated Persons

An individual is considered fully vaccinated against COVID-19 if:

- At least 2 weeks have passed since the person received the second dose in a two-dose series
- At least 2 weeks have passed since the person received the vaccine in a single-dose series

***If you do not meet these requirements, you are NOT fully vaccinated. The Centers for Disease Control and Prevention recommends delaying international travel until you are fully vaccinated.***

**Below are the travel recommendations for fully vaccinated individuals:**

- Fully vaccinated people can travel internationally without getting a COVID-19 test before travel, unless it is required by the international destination.
- Fully vaccinated people do not need to self-quarantine after returning to the United States, unless required by a state or local jurisdiction.
- Fully vaccinated people **MUST** have a negative COVID-19 test result before they board a flight to the United States
- Fully vaccinated people should get a COVID-19 test 3 to 5 days after returning from international travel.
- Fully vaccinated people should continue to take COVID-19 precautions of handwashing, social distancing and mask wearing while traveling internationally
